Raymundo M. Oyong

Senior AI & Automation Engineer

Bulacan, Philippines · oyongrm@gmail.com · linkedin.com/in/raymundo-oyong-4ab94321a · github.com/oyong1926 · raymundo-oyong.vercel.app

Open to senior AI and automation roles with Australian teams: remote on contract, or relocating with visa sponsorship. UTC+8, overlapping most of the Sydney working day.

SUMMARY

Software engineer with eight years of building business systems, leading with AI and automation: voice agents that book into practice systems, document drafting with every statement linked to its source, and robotic process automation that cut manual SAP processing by 70–80%. Owns a system from the first client conversation to live support.

PROFESSIONAL EXPERIENCE

QTX (Qualiticks Pty Ltd) — Sydney, Australia (remote)

Senior AI Software Engineer — January 2026 – Present

Jayne Bandy AI — *AI voice receptionist for dental practices; lead engineer since April 2026*

- Lead engineering of a live AI receptionist that answers and books calls for dental practices, covering voice quality, practice-system integrations and billing.
- Integrated three practice-management systems (CareStack, Core Practice, Dentally) behind one receptionist script, matching callers to patient records by phone number.
- Designed a review workflow that tests every script change against simulated and replayed real calls before approval, with version history and restore.
- Added failure alerts and a 15-minute health check, so an AI-provider outage now raises an alert instead of going unnoticed.
- Launched automatic trials, a premium tier with custom voices, Stripe subscription sync and per-country demo numbers.

Workforce and care platform — *provider under the National Disability Insurance Scheme (NDIS)*

- Built rostering, SCHADS award pay rates and penalties, timesheets, invoicing by funding type, and MYOB payroll and sales-journal export.
- Rebuilt payment reconciliation so the system suggests a match for each payment line and Finance approves it; no invoice closes automatically.
- Restricted every user to the records in their reach (own, team, site or program), enforced with row-level security in the database.

Care-plan drafting — *aged-care provider; technical lead*

- Specified a sprint for the development team and built AI drafting in which every statement cites its source page, with contradictions raised for a clinician to review.
- Reduced the time per action from 6.5 seconds to about 1 second by fixing the database connection.

RL Finance — *finance system for a retirement-village operator*

- Building a deferred management fee engine with Consumer Price Index (CPI) increases behind an approval step, matched to the client's own spreadsheet to the cent and kept as an automated test.
- Delivered direct-debit files, period locking, and group profit-and-loss, balance-sheet and trial-balance reports across entities.

Internal operations platform (Workable) and SEED AI agents

- Added six modules to the company platform, covering marketing campaigns, certification tracking synced from Microsoft Learn, 30/60/90-day onboarding, key performance indicator (KPI) reviews, ad-audience sync and sales booking links.

- Resolved recurring database-connection exhaustion by removing unfiltered real-time subscriptions.
- Built a contract-management agent and a standalone e-signature flow with tenant isolation and retrieval-augmented chat.

Ortigas Land Corporation Pasig, Philippines

Software Developer Officer January 2024 – December 2025

- Led and mentored a four-person development team; introduced structured code reviews and secure development practices.
- Cut manual SAP processing time by 70–80% with a Power Automate Desktop bot that enters invoices, reversals and contract locks in the SAP desktop client.
- Eliminated 100+ hours a month of manual HR work with a Power Automate bot that processes government remittances using AI document extraction.
- Built the company's first in-house payment gateway (UnionBank UPay) with rate limiting and reCAPTCHA protection.
- Replaced a failing database backup uploader with a Windows service that partitions large files for Amazon S3.

Senior Software Developer Associate January 2022 – December 2023

- Developed ASP.NET Core Web APIs exposing SAP data to third-party applications.
- Led the team that built the customer shopping module of the company's first e-commerce website.
- Maintained and tuned multiple MS SQL Server databases for performance and availability.

Software Developer Associate May 2019 – December 2021

- Developed the company's first digital IT ticketing system.
- Integrated SharePoint with in-house applications to automate daily accomplishment reports; administered Tableau.

OCLP Holdings Inc. Pasig, Philippines

Programmer July 2018 – May 2019

- Developed the company's first tenant-portal mobile application in Xamarin Forms.
- Designed and maintained relational databases for in-house projects.

TECHNICAL SKILLS

AI: Large language model (LLM) prompt design and evaluation, retrieval-augmented generation, voice agents (ElevenLabs, Twilio), Azure Document Intelligence, Azure OpenAI

Automation: Power Automate (desktop and cloud flows), SAP ECC 6 (Basis, FI-CO, MM), SharePoint

Platforms: Supabase (PostgreSQL, row-level security, Edge Functions), Azure Functions, MS SQL Server, Vercel, Stripe

Languages: TypeScript, React, C# and .NET, SQL, Python

Integrations: CareStack, Core Practice, Dentally, MYOB, Westpac, Microsoft Entra ID, Microsoft Learn, LinkedIn and Meta Ads, Amazon SES

EDUCATION

STI College Meycauayan Bulacan, Philippines

Bachelor of Science in Computer Science 2018

- Thesis: Android augmented-reality game built in Unity with C#; named Best Thesis Presenter.
- First Runner-Up, App and Running timed Android development competition.

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate February 2026
